

KV-AJx-A MULTI-BAND ANTI-JAMMING GNSS RECEIVER

- Multi-band anti-jamming GNSS receiver: up to 3 frequency bands simultaneously (consider specified options)
- Multi-system solution: GPS / Galileo / NavIC(IRNSS)
 / GLONASS / BeiDou can be used (consider specified options)
- Up to 100 dB J/S performance
- Low power consumption: 5...12.8 W (depending on options)
- Support of up to 3 jammers simultaneously for each of frequency bands
- Receiver based on own NTLab's high-performance ASICs: RFFE, baseband, anti-jamming processors
- Up-converter RF output for external GNSS receivers
- Internal receiver with INS, RAW data and with velocity, acceleration option by request

Coupled with the use of a multi-band 4-element antenna array (the module can be provided by Kosminis Vytis), the tri-band solution allows to suppress interferences in up to 3 directions on 3 frequency plans simultaneously. This approach provides significantly higher protection against interference compared to single-frequency options. KV-AJx-A contains a MEMS inertial sensor and thus allows the creation the GNSS-aided INS (GNSS+INS) solutions for position, velocity, time, and attitude. The jamming-free cleared RF signal can also be delivered to external non-protected GNSS receivers to obtain position, velocity, and time.

Parameter	Description	Note						
Interference rejection:								
Single interference	Up to 40 dB	For one CW signal of single jammer						
suppression	Up to 30 dB	For one AWGN signal of single jammer						
Several interferences	Up to 32 dB	For one CW signal of each jammer						
suppression (up to three)	Up to 23 dB	For one AWGN signal of each jammer						
Interference resistance:	,	,						
Oin als is a series	Up to 90 dB (J/S)	With internal GNSS receiver						
Single jammer	Up to 100 dB (J/S)	With external third party GNSS receiver						
Several jammers	Up to 82 dB (J/S)	Up to three directions						
Anti-Spoofing Capability	YES	Hardware ready						
Number of channels	4	For each frequency band						
Operation modes:	•	· · ·						
GNSS mode	Internal GNSS receiver	By default
